

Make your own model of a Roman Gateway

Make your own model of a Roman gateway like the one in the picture below. Roman London was surrounded by walls over 2 miles long with 7 gateways into the city

Using the picture of the gateway on the next page carefully follow the instructions below. As you will need some glue and a pair of scissors you may need an adult to help you with this.

1. Carefully cut around the picture of the gateway.
2. Add any colour or other details to your model.
3. Fold the paper along the lines between the arrows. Fold over flaps (coloured in grey).
4. Next use some glue or tape to stick flap 1 to the opposite wall of the gateway.
5. Then complete the tops of the towers.
6. Then fold over the section above the arches and glue flap.
