The Department of the Built Environment encourages prospective applicants to make contact at an early stage in the design process to ensure that St. Paul's Heights and other policy considerations are taken fully into account. Advice upon the digital files is available from the Monitoring & Information team (PLN-Moninfo@cityoflondon.gov.uk)

The St Paul's Heights operate by defining a series of inclined planes between the viewpoints and the Cathedral. These form a ceiling on development through which no building can be allowed to rise if the views are to be preserved. The viewpoints protected by the St Paul’s Heights are from the Thames bridges and south bank between Hungerford Bridge and London Bridge, together with a number of views from streets to the west, north and east.

- **St Paul’s Heights Policy Area Boundary**
- **St Paul’s Heights Policy Area**
- **St Paul’s Heights Grid**
  - 'Grid square' heights limitation in metres above Ordnance Datum Newlyn.
  - Value applies to the centre of the square.
- **St Paul’s Heights Grid Centroid**
- **St Paul’s Heights Setbacks**
  - 'Set back' heights limitation in metres above Ordnance Datum Newlyn.
  - Value applies to the blue line.

This map shows the St. Paul’s Heights only. Other view protection policies may also be relevant and prospective applicants are advised to contact the Department of the Built Environment at an early stage for further details.
